Facilitating Consults and Collaboration with Skype

- Clear Voice Communications
- Videoconferencing Capabilities
- Instant messaging and conference calls
- FREE! – www.skype.com

5 Steps To Success

Step 1: Know Your Needs

- ⦿ Every component added can complicate the process
- ⦿ Ask yourself what are the “must haves”
 - Recording video
 - Using wireless headsets

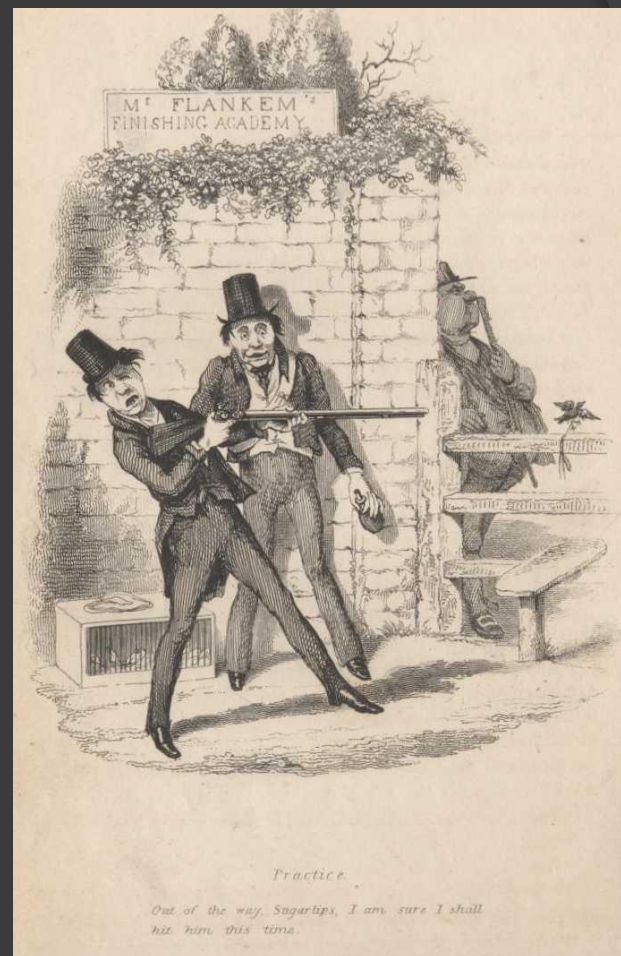

Step 2: Gain Appropriate Permission

- ◉ Who should you notify before you begin (DoSE, DTC, others?)
- ◉ Permission Slips and Confidentiality

Step 3: Practice Makes Perfect

- Do a few test runs with friends or colleagues before you begin
- Double check your webcam, speakers, microphone and connections

Step 4: Collect Baseline Data

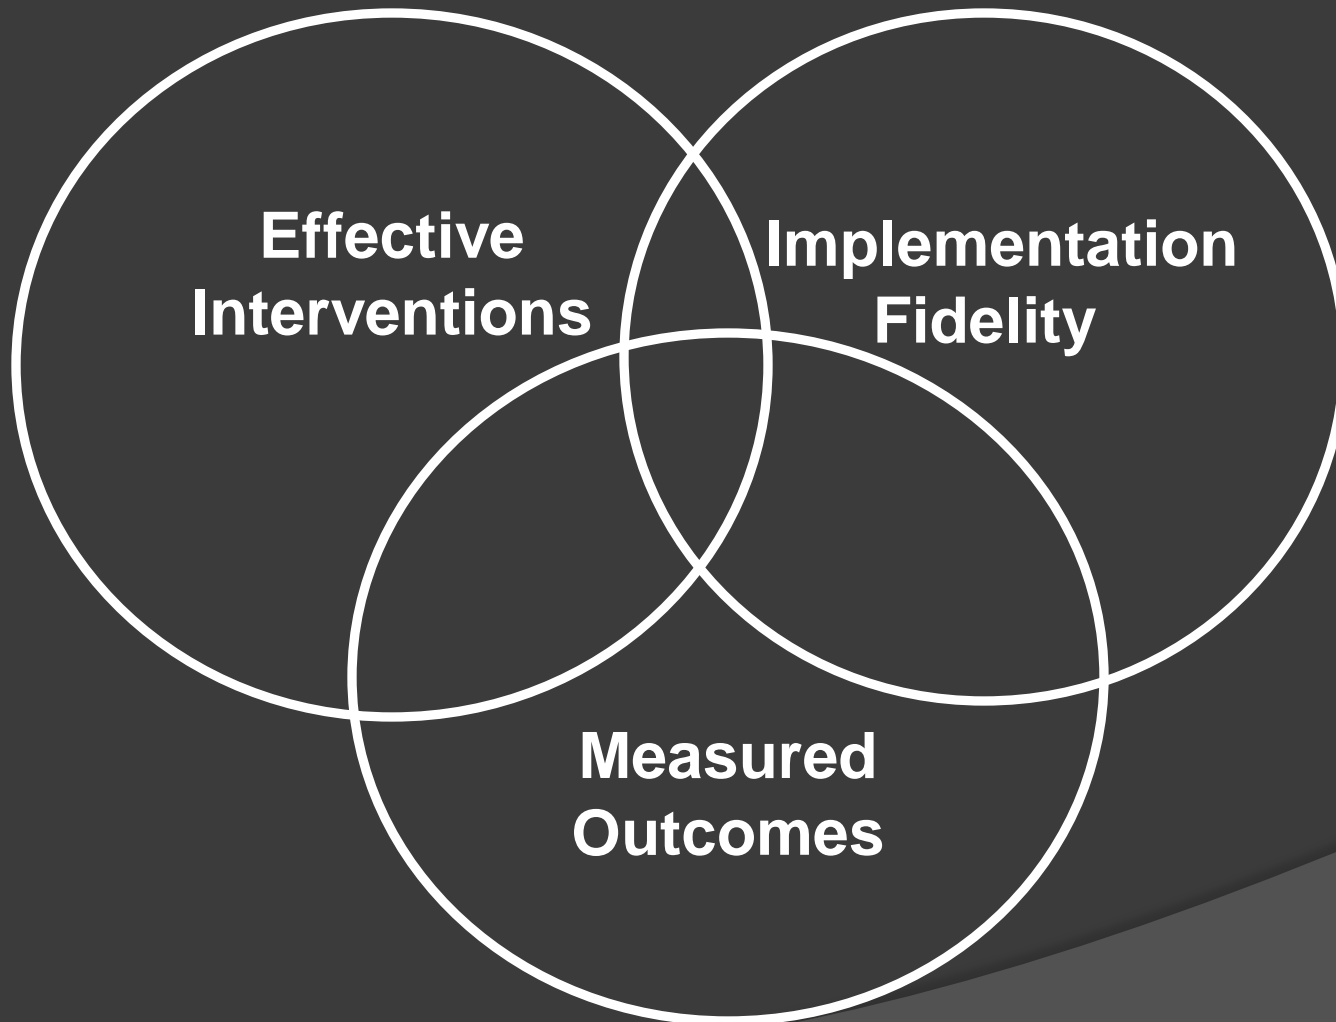

- First, determine what data you are collecting to monitor progress
- Determine your technology set-up from the above

Step 5: Develop Interventions and Collect More Data

- ⦿ Interventions can be demonstrated directly through Skype
- ⦿ Continuous data collection after intervention is in place should continue
- ⦿ To help with intervention success, wireless headsets may help
- ⦿ If intervention doesn't work, it's back to the drawing board
